Press Release
09/14/2005

G&W-Services Inc. of Uxbridge, Massachusetts announced today the successful installation of an MDSI OpenCNC control retrofit package to a BostoMatic 5-Axis machine at Sichuan Air Separation Plant in Jianyang, Sichuan, China. This represents the first MDSI OpenCNC control system sold and installed in the Peoples Republic of China.

The BostoMatic 505-40TC, 5-Axis milling machine, was originally installed in 1992 by Gary Wells then Director of Far East Operations for Boston Digital Corporation. According to Mr. Wells "the equipment had been well maintained by Sichuan A/S and was a prime candidate for a retrofit and upgrade". Along with the control retrofit was a comprehensive service package for the machine and electrics, a new 10K rpm spindle, along with repair parts for the flood, hydraulic and automatic tool changer systems.

"The machine is now running as good if not better than when it was originally installed. Over a two day period we machined two 5-Axis turbo chargers, designed for us by Turbocam of Dover, NH, and the results were within +/- .001" of production specifications" according to Mr. Wells.

Gary Wells resigned from Boston Digital in 1995 to establish G&W-Services as an out-of-warranty support and service company for BostoMatic equipment end-users. Since that time G&W-Services has become the premier BostoMatic support company providing retrofits, rebuilds, repair parts along with new equipment to the BostoMatic family.
